# Description

Akyga® AK-AD-33 is a high quality, aesthetically made USB 3.0 HUB with the possibility of connecting an additional power supply. The device has four USB 3.0 ports, allowing data transmission speed up to 500 MB/s.
Active HUB AK-AD-33 allows you to connect devices with high power consumption such as a portable disk. Each socket has a separate button that allows you to manually enable / disable a given port, thanks to which we can decide which device we are currently using.
Connecting the power supply to the adapter enables devices to be charged with up to 900 mA of current at each socket separately. It is recommended to use the power adapter with a 3.5 x 1.35 mm plug with minimum parameters of 5V / 4A.
