SP483 / SP485

Low Power Half-Duplex RS-485 Transceivers

FEATURES

- +5V Only
- Low Power BiCMOS
- Driver / Receiver Enable
- Slew Rate Limited Driver for Low EMI (SP483)
- Low Power Shutdown mode (SP483)
- RS-485 and RS-422 Drivers/Receivers

SP483, SP485
Pinout (Top View)

DESCRIPTION

The **SP483** and **SP485** are a family of half-duplex transceivers that meet the specifications of RS-485 and RS-422. Their BiCMOS design allows low power operation without sacrificing performance. The **SP485** meets the requirements of RS-485 and RS-422 up to 5Mbps. Additionally, the **SP483** is equipped with a low power Shutdown mode. The **SP483** is internally slew rate limited to reduce EMI and can meet the requirements of RS-485 and RS-422 up to 250kbps.

SP483 and SP485

ABSOLUTE MAXIMUM RATINGS

These are stress ratings only and functional operation of the device at these ratings or any other above those indicated in the operation sections of the specifications below is not implied. Exposure to absolute maximum rating conditions for extended periods of time may affect reliability.

V_{CC}+7V

Input Voltages

Logic.....-0.3V to ($V_{CC} + 0.5V$)

Drivers.....-0.3V to ($V_{CC} + 0.5V$)

Receivers.....+/-15V

Output Voltages

Logic.....-0.3V to ($V_{CC} + 0.5V$)

Drivers.....+/-15V

Receivers.....-0.3V to ($V_{CC} + 0.5V$)

Storage Temperature.....-65°C to +150°C

Power Dissipation

8-pin NSOIC.....500mW

ELECTRICAL CHARACTERISTICS

T_{MIN} to T_{MAX} and $V_{CC} = 5V \pm 5\%$ unless otherwise noted.

PARAMETERS	MIN.	TYP.	MAX.	UNITS	CONDITIONS
SP483/SP485 DRIVER					
DC Characteristics					
Differential Output Voltage			V_{CC}	Volts	Unloaded; $R = \infty$; see figure 1
Differential Output Voltage	2		V_{CC}	Volts	With Load; $R = 50\Omega$ (RS-422); see figure 1
Differential Output Voltage	1.5		V_{CC}	Volts	With Load; $R = 27\Omega$ (RS-485); see figure 1
Change in Magnitude of Driver Differential Output Voltage for Complimentary states			0.2	Volts	$R = 27\Omega$ or $R = 50\Omega$; see figure 1
Driver Common Mode Output Voltage			3	Volts	$R = 27\Omega$ or $R = 50\Omega$; see figure 1
Input High Voltage	2.0			Volts	Applies to DE, DI, \overline{RE}
Input Low Voltage			0.8	Volts	Applies to DE, DI, \overline{RE}
Input Current			+/-10	μA	Applies to DE, DI, \overline{RE}
Driver Short Circuit Current, $V_{OUT} = HIGH$			250	mA	$-7V \leq V_O \leq +12V$

Figure 8. Receiver Enable and Disable Times

The **SP483** and **SP485** are half-duplex differential transceivers that meet the requirements of RS-485 and RS-422. Fabricated with an **Exar** proprietary BiCMOS process, this product requires a fraction of the power of older bipolar designs.

The RS-485 standard is ideal for multi-drop applications and for long-distance interfaces. RS-485 allows up to 32 drivers and 32 receivers to be connected to a data bus, making it an ideal choice for multi-drop applications. Since the cabling can be as long as 4,000 feet, RS-485 transceivers are equipped with a wide (-7V to +12V) common mode range to accommodate ground potential differences. Because RS-485 is a differential interface, data is virtually immune to noise in the transmission line.

Drivers

SP483 and SP485

The driver outputs of the **SP483** and **SP485** are differential outputs meeting the RS-485 and RS-422 standards. The typical voltage output swing with no load will be 0 Volts to +5 Volts. With worst case loading of 54 Ω across the differential outputs, the drivers can maintain greater than 1.5V voltage levels. The drivers of the **SP483** and **SP485** have an enable control line which is active HIGH. A logic HIGH on DE (pin 3) will enable the differential driver outputs. A logic LOW on the DE(pin 3) will tri-state the driver outputs.

The transmitters of the **SP485** will operate up to at least 5Mbps. The **SP483** has internally slew rate limited driver outputs to minimize EMI. The maximum data rate for the **SP483** driver is 250kbps.

Receivers

SP483 and SP485

The **SP483** and **SP485** receivers have differential inputs with an input sensitivity as low as $\pm 200\text{mV}$. Input impedance of the receivers is typically 15k Ω (12k Ω minimum). A wide common mode range of -7V to +12V allows for large ground potential differences between systems. The receivers of the **SP483** and **SP485** have a tri-state enable control pin. A logic LOW on RE (pin 2) will enable the receiver, a logic HIGH on RE (pin 2) will disable the receiver.

The receiver for the **SP485** will operate up to at least 10Mbps. The **SP483** receiver is rated for data rates up to 250kbps. The receiver for each of the three devices is equipped with the fail-safe feature. Fail-safe guarantees that the receiver output will be in a HIGH state when the input is left unconnected and floating.

Shutdown Mode

SP483

The **SP483** is equipped with a Shutdown mode. To enable the shutdown state, both driver and receiver must be disabled simultaneously. A logic LOW on DE (pin 3) and a Logic HIGH on RE (pin 2) will put the **SP483** into Shutdown mode. In Shutdown, supply current will drop to typically 1 μA .
