

## The General Purpose Bearing – iglidur® G: the most sold iglidur® bearing worldwide

Over 650 sizes available ex stock

---

Maintenance-free, dry running

---

High wear resistance

---

Resistance to dust and dirt

---

Cost-effective

---

# iglidur® G | The General Purpose Bearing

**Most popular iglidur® material worldwide.** iglidur® G bearings cover an extremely wide range of different requirements – they are truly “all round”. Typical applications include medium to high loads, medium sliding speeds and medium temperatures.

## When to use it?

- Economical all-round performance bearing
- Maintenance-free, dry running
- Vibration dampening
- High wear resistance
- Resistance to dust and dirt
- Over 900 sizes available from stock
- Cost-effective
- For above average loads
- For low to average running speeds
- When the bearing needs to run on different shaft materials
- For oscillating and rotational movements

## When not to use it?

- When mechanical reaming of the wall surface is necessary
  - ▶ iglidur® M250, page 127
- When the highest wear resistance is required
  - ▶ iglidur® W300, page 151
- When universal chemical resistance is required iglidur®X, page 173
- If temperatures are constantly greater than +130 °C
  - ▶ iglidur® H, page 353
  - ▶ iglidur® X, page 173
  - ▶ iglidur® H370, page 375
- For underwater use
  - ▶ iglidur® H370, page 375

# iglidur® G | Technical Data

iglidur® G is the decathlete among iglidur® materials. It performs exceedingly well in all technical disciplines and is the classic all-rounder, primarily with respect to the overall general, mechanical, thermal and tribological specifications.

## Mechanical Properties

With increasing temperatures, the compressive strength of iglidur® G plain bearings decreases. The Diagram 02 shows this inverse relationship. However, at the longterm maximum temperature of +130 °C the permissible surface pressure is almost 35 MPa. The recommended maximum surface pressure is a mechanical material parameter. No conclusions regarding the tribological properties can be drawn from this.

**Diagram 02: Recommended maximum surface pressure as a function of temperature (80 MPa at +20 °C)**

Diagram 03 shows the elastic deformation of iglidur® G during radial loading. At the recommended maximum surface pressure of 80 MPa the deformation is less than 4%. The plastic deformation is minimal up to a pressure of approximately 100 MPa. However, it is also dependant on the cycle time.

### ► Surface Pressure, page 63

**Diagram 03: Deformation under pressure and temperature**

## Permissible Surface Speeds

iglidur® G has been developed for low to medium surface speeds.

The maximum values shown in table 02 can only be achieved at low pressures. At the given speeds, friction can cause a temperature increase to maximum permissible levels. In practice, though, this temperature level is rarely reached due to varying application conditions.

### ► Surface Speed, page 65

m/s	Rotating	Oscillating	Linear
Continuous	1	0.7	4
Short term	2	1.4	5

**Table 02: Maximum running speed**

## Temperatures

Application temperatures greatly affect the properties of plain bearings.

The short term maximum temperature is +220 °C, this allows the use of iglidur® G plain bearings in heat treating applications in which the bearings are not subjected to additional loading.

The temperature in an application also has an effect on the bearing wear. With increasing temperatures, the wear increases and this effect is significant when temperatures rise over +120 °C.

### ► Application Temperatures, page 66

iglidur® G	Application temperature
Minimum	-40 °C
Max. long term	+130 °C
Max. short term	+220 °C
Add. securing is required from	+80 °C

**Table 03: Temperature limits**

## Friction and Wear

Similar to wear resistance, the coefficient of friction  $\mu$  also changes with the load. The coefficient of friction decreases with increasing pressures, whereas an increase in surface speed causes an increase of the coefficient of friction. This relationship explains the excellent results of iglidur® G plain bearings for high loads and low speeds (Diagrams 04 and 05).

► Coefficients of Friction and Surfaces, **page 68**

► Wear Resistance, **page 69**

Diagram 04: Coefficient of friction as a function of the running speed,  $p = 0.75$  MPa

Diagram 05: Coefficient of friction as a function of the pressure,  $v = 0.01$  m/s

## Shaft Materials

The friction and wear are also dependent, to a large degree, on the shaft material. Shafts that are too smooth, increase both the coefficient of friction and the wear of the bearing. For iglidur® G a ground surface with an average roughness  $R_a = 0.8 \mu\text{m}$  is recommended (Diagram 06).

Diagrams 07 to 09 show results of testing different shaft materials with plain bearings made of iglidur® G. In Diagram 07 it shows that iglidur® G can be combined with various shaft materials. The simple shaft materials of free-cutting steel and HR carbon steel have proven best at low loads. This helps to design cost-effective systems, since both iglidur® G and the shaft are economically priced. It is important to notice that with increasing loads, the recommended hardness of the shaft increases. The “soft” shafts tend to wear more easily and thus the wear of the overall system. If the loads exceed 2 MPa it is important to recognize that the wear rate (the gradient of the curves) clearly decreases with the hard shaft materials. The comparison of rotational movements to oscillating movements shows that iglidur® G provides advantages in oscillating movements. The wear of the bearing is smaller for equivalent conditions. The higher the load, the greater the difference.

If the shaft material you plan on using is not shown in these test results, please contact us.

## Additional Properties

### Chemical Resistance

iglidur® G plain bearings have strong resistance to chemicals. They are also resistant to most lubricants.

iglidur® G plain bearings are not attacked by most weak organic or inorganic acids.

► Chemical Table, page 1258

Medium	Resistance
Alcohol	+ to 0
Hydrocarbons	+
Greases, oils without additives	+
Fuels	+
Diluted acids	0 to –
Strong acids	–
Diluted alkalines	+
Strong alkalines	0

+ resistant 0 conditionally resistant – not resistant

All data given at room temperature [ $+20 \text{ }^\circ\text{C}$ ]

Table 05: Chemical resistance

### Radiation Resistance

Plain bearings made of iglidur® G are resistant to radiation up to an intensity of  $3 \cdot 10^2 \text{ Gy}$ .

### UV Resistance

iglidur® G plain bearings are permanently resistant to UV radiation.

### Vacuum

iglidur® G plain bearings outgas in a vacuum. Use in a vacuum environment is only possible with dehumidified bearings.

### Electrical Properties

iglidur® G plain bearings are electrically insulating.

Volume resistance	$> 10^{13} \text{ }\Omega\text{cm}$
Surface resistance	$> 10^{11} \text{ }\Omega$

## Moisture Absorption

The moisture absorption of iglidur® G plain bearings is approximately 0.7 % in standard atmosphere. The saturation limit submerged in water is 4 %. This must be taken into account for these types of applications.

### Maximum moisture absorption

At +23 °C/50 % r.h. 0.7 % weight

Max. water absorption 4.0 % weight

**Table 06: Moisture absorption**

**Diagram 10: Effect of moisture absorption on plain bearings**

## Installation Tolerances

iglidur® G plain bearings are standard bearings for shafts with h-tolerance (recommended minimum h9). The bearings are designed for pressfit into a housing machined to a H7 tolerance. After being assembled into a nominal size housing, in standard cases the inner diameter automatically adjusts to the E10 tolerances. For particular dimensions the tolerance differs depending on the wall thickness (please see product range table).
