NTE941 Integrated Circuit Operational Amplifier

Description:

The NTE941 is a general purpose operational amplifier in an 8-Lead TO5 Metal Can type package and offers many features which make its application nearly foolproof: overload protection on the input and output, no latch-up when the common mode range is exceeded, as well as freedom from oscillators.

Absolute Maximum Ratings:

Supply Voltage, V_S	$\pm 18V$
Differential Input Voltage, V_{ID}	$\pm 30V$
Common Mode Input Voltage (Note 2), V_{ICM}	$\pm 15V$
Power Dissipation (Note 1), P_D	500mW
Output Short-Circuit Duration, t_S	Continuous
Junction Temperature, T_J	$+100^\circ C$
Operating Temperature Range, T_{opr}	0° to $+70^\circ C$
Storage Temperature Range, T_{stg}	-65° to $+150^\circ C$
Lead Temperature (During Soldering, 10sec), T_L	$+300^\circ C$
Thermal Resistance, Junction-to-Ambient, R_{thJA}	$+150^\circ C/W$
Thermal Resistance, Junction-to-Case, R_{thJC}	$+80^\circ C/W$

Note 1. For operation at elevated temperatures, these devices must be derated based on thermal resistance, and T_J Max ($T_J = T_A + (R_{thJA} P_D)$).

Note 2. For supply voltage less than $\pm 15V$, the absolute maximum input voltage is equal to the supply voltage.

Electrical Characteristics: ($V_S = \pm 15V$, $0^\circ \leq T_A \leq +70^\circ C$ unless otherwise specified)
