PWM Control Frequ	f _{PWM}	190	-	2K	Hz	(3)		
LED Power Current	LED_VCCS =Typ.	ILED	450	532	609	mA	(4)	

Note (1) ILED_{RUSH}: the maximum current when LED_VCCS is rising,

 $\ensuremath{\mathsf{ILED}_{\mathsf{IS}}}$: the maximum current of the first 100ms after power-on,

Measurement Conditions: Shown as the following figure. LED_VCCS = Typ, Ta = 25 \pm 2 °C, f_{PWM} = 200 Hz, Duty=100%.

VLED rising time is 0.5ms

- Note (2) If the PWM control duty ratio is less than 10%, there is some possibility that acoustic noise or backlight flash can be found. And it is also difficult to control the brightness linearity.
- Note (3) If PWM control frequency is applied in the range less than 1KHz, the "waterfall" phenomenon on the screen may be found. To avoid the issue, it's a suggestion that PWM control frequency should follow the criterion as below.

PWM control frequency f_{PWM} should be in the range

$$(N+0.33)*f \le f_{\mathsf{PWM}} \le (N+0.66)*f$$
 $N: \mathsf{Integer} \ (N \ge 3)$ $f: \mathsf{Frame rate}$

Note (4) The specified LED power supply current is under the conditions at "LED_VCCS = Typ.", Ta = 25 \pm 2 °C, f_{PWM} = 200 Hz, Duty=100%.

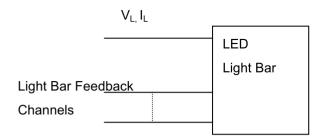

4.3.3 BACKLIGHT UNIT

Ta = 25 ± 2 °C

Power Consumption	PL	1	1.61	1.77	W	(3)	
LED Life Time	L _{BL}	12000	-	-	Hrs	(4)	

Note (1) LED current is measured by utilizing a high frequency current meter as shown below:

Note (2) For better LED light bar driving quality, it is recommended to utilize the adaptive boost converter with current balancing function to drive LED light-bar.

Note (3) $P_L = I_L \times V_L$ (Without LED converter transfer efficiency)

Note (4) The lifetime of LED is defined as the time when it continues to operate under the conditions at Ta = 25 ± 2 °C and I_L = 20 mA(Per EA) until the brightness becomes $\leq 50\%$ of its original value.

Note (4) Definition of Average Luminance of White (LAVE):

Measure the luminance of gray level 63 at 5 points

$$L_{AVE} = [L(1) + L(2) + L(3) + L(4) + L(5)] / 5$$

L (x) is corresponding to the luminance of the point X at Figure in Note (6)

FutureLabs LTD

Note (5) Measurement Setup:

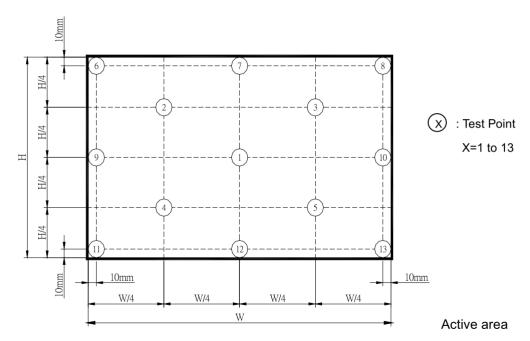

The LCD module should be stabilized at given temperature for 20 minutes to avoid abrupt temperature change during measuring. In order to stabilize the luminance, the measurement should be executed after lighting Backlight for 20 minutes in a windless room.

Note (6) Definition of White Variation (δW):

Measure the luminance of gray level 63 at 5 points

 $\delta W_{5p} = \{Minimum [L (1) \sim L (5)] / Maximum [L (1) \sim L (5)]\}*100\%$

Note (7) The listed optical specifications refer to the initial value of manufacture, but the condition of the specifications after long-term operation will not be warranted.

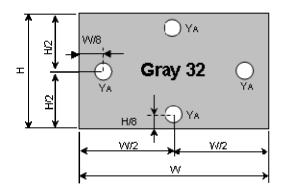

Note (8) Cross Talk (CT):

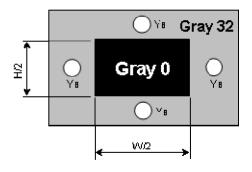

CT=
$$\mid Y_B - Y_A \mid / Y_A \times 100\%$$

Where

Y_A=Luminance of measured location in left figure

Y_B=Luminance of measured location in right figure

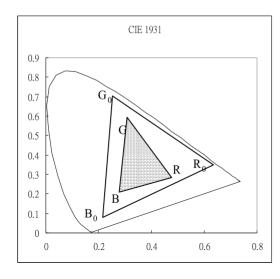

Note (9) Definition of color gamut (C.G%):

 $R_0,\,G_0,\,B_0$: CIE1931 coordinates of red, green, and blue defined by NTSC.

R, G, B: CIE1931 coordinates of red, green, and blue in module at 63 gray level.

Area (R₀, G₀, B₀): Area of the triangle defined by coordinate R0, G0, B0.

Area(R, G, B): Area of the triangle defined by coordinate R, G, B

- Note (1) criteria: Normal display image with no obvious non-uniformity and no line defect.
- Note (2) Evaluation should be tested after storage at room temperature for more than two hour
- Note (3) At testing Vibration and Shock, the fixture in holding the module has to be hard and rigid enough so that the module would not be twisted or bent by the fixture.

7. PRECAUTIONS

7.1 HANDLING PRECAUTIONS

- (1) The module should be assembled into the system firmly by using every mounting hole. Be careful not to twist or bend the module.
- (2) While assembling or installing modules, it can only be in the clean area. The dust and oil may cause electrical short or damage the polarizer.
- (3) Use fingerstalls or soft gloves in order to keep display clean during the incoming inspection and assembly process.
- (4) Do not press or scratch the surface harder than a HB pencil lead on the panel because the polarizer is very soft and easily scratched.
- (5) If the surface of the polarizer is dirty, please clean it by some absorbent cotton or soft cloth. Do not use Ketone type materials (ex. Acetone), Ethyl alcohol, Toluene, Ethyl acid or Methyl chloride. It might permanently damage the polarizer due to chemical reaction.
- (6) Wipe off water droplets or oil immediately. Staining and discoloration may occur if they left on panel for a long time.
- (7) If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth. In case of contacting with hands, legs or clothes, it must be washed away thoroughly with soap.
- (8) Protect the module from static electricity, it may cause damage to the C-MOS Gate Array IC.
- (9) Do not disassemble the module.
- (10) Do not pull or fold the LED wire.
- (11) Pins of I/F connector should not be touched directly with bare hands.

7.2 STORAGE PRECAUTIONS

- (1) High temperature or humidity may reduce the performance of module. Please store LCD module within the specified storage conditions.
- (2) It is dangerous that moisture come into or contacted the LCD module, because the moisture may damage LCD module when it is operating.
- (3) It may reduce the display quality if the ambient temperature is lower than 10 °C. For example, the response time will become slowly, and the starting voltage of LED will be higher than the room temperature.

7.3 OPERATION PRECAUTIONS

- (1) Do not pull the I/F connector in or out while the module is operating.
- (2) Always follow the correct power on/off sequence when LCD module is connecting and operating. This can prevent the CMOS LSI chips from damage during latch-up.
- (3) The startup voltage of Backlight is approximately 1000 Volts. It may cause electrical shock while assembling with converter. Do not disassemble the module or insert anything into the Backlight unit.

Appendix. EDID DATA STRUCTURE

The EDID (Extended Display Identification Data) data formats are to support displays as defined in the VESA Plug & Display and FPDI standards.

D) LCD IIS

1.Description

These inspection standards shall be applied to LCD Module supplied by FutureLabs.

2. The environmental condition of inspection

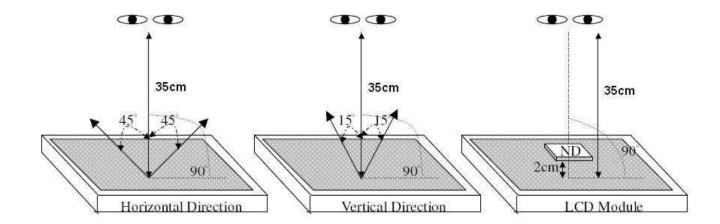

The environmental condition and visual inspection shall be conducted as below.

- (1) Ambient temperature : $15\sim25^{\circ}$ C
- (2) Humidity: 25~75 %RH
- (3) External appearance inspection shall be conducted by using a single 20W fluorescent lamp or equivalent illumination.
- (4) Panel visual inspection on the operation condition for cosmetic shall be conducted at the distance 35cm or more between the LCD module and eyes of inspector.

Ambient Illumination: 300 ~ 500 Lux for external appearance inspection

Ambient Illumination: 100 ~ 200 Lux for light on inspection

- (5) The viewing angle:
 - a) 15 degree to the front surface of display panel in vertical direction.
 - b) 45 degree to the front surface of display panel in horizontal direction.
- (6) ND filter shall be conducted at the distance 2 cm to front surface of display panel and shall be conducted at the distance 35 cm between the LCD module and eyes of inspector.

3. Classification of defects

Defects are classified two types, major defect and minor defect according to the defect. And, the definition of defects is classified as below.

(1) Major defect

Any defect may result in functional failure, or reduce the usability of product for its purpose. For example, electrical failure, deformation and etc..

(2) Minor defect

A defect that is not to reduce the usability of product for its intended purpose and un-uniformity, dot defect and etc..

The criteria on major or minor judgment will be according with the classification of defects.

4.Inspection Criteria

- (1) Definition of dot defect induced from the panel inside
 - a) Bright dot: Dots appear bright and unchanged in size in which module is displaying under black pattern.
 - b) Dark dot: Dots appear dark and unchanged in size in which module is displaying under pure red, green, blue, white picture.
