ProLight PM6B-3LFx-B 3W RGB Power LED Technical Datasheet Version: 1.0

# **ProLight Opto PM6B Series**

### Features

- · R, G, B three color in one Package
- · High flux per LED
- · Good color uniformity
- · Low-temp. & lead free reflow soldering
- More energy efficient than incandescent and most halogen lamps
- · Low Voltage DC operated
- · Instant light (less than 100ns)
- · No UV

# **Main Applications**

- · Reading lights (car, bus, aircraft)
- · Portable (flashlight, bicycle)
- · Uplighters/Downlighters
- · Decorative/Entertainment
- · Bollards/Security/Garden
- · Cove/Undershelf/Task
- Indoor/Outdoor Commercial and Residential Architectural
- Automotive Ext (Stop-Tail-Turn CHMSL, Mirror Side Repeat)
- · LCD backlights

# **Emitter Mechanical Dimensions**

Notes:

- 1. The Anode side of the device is denoted by a hole in the lead frame.
- 2. Electrical insulation between the case and the board is required. Do not electrically connect either the anode or cathode to the slug.
- 3. Drawing not to scale.
- 4. All dimensions are in millimeters.
- 5. Unless otherwise indicated, tolerances are  $\pm$  0.20mm.
- 6. Please do not bend the leads of the LED, otherwise it will damage the LED.
- 7. Please do not use a force of over 3kgf impact or pressure on the lens of the LED, otherwise it will cause a catastrophic failure.

\*The appearance and specifications of the product may be modified for improvement without notice.

### **Star Mechanical Dimensions**

Notes:

- 1. Slots in aluminum-core PCB for M3 or #4 mounting screw.
- 2. Electrical interconnection pads labeled on the aluminum-core PCB with "+" and "-" to denote positive and negative, respectively. All positive pads are interconnected, as are all negative pads, allowing for flexibility in array interconnection.
- 3. Drawing not to scale.
- 4. All dimensions are in millimeters.
- 5. Unless otherwise indicated, tolerances are  $\pm$  0.20mm.
- 6. Please do not use a force of over 3kgf impact or pressure on the lens of the LED, otherwise it will cause a catastrophic failure.

\*The appearance and specifications of the product may be modified for improvement without notice.

- All temperatures refer to topside of the package, measured on the package body surface.
- Repairing should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used. It should be confirmed beforehand whether the characteristics of the LEDs will or will not be damaged by repairing.
- Reflow soldering should not be done more than three times.
- When soldering, do not put stress on the LEDs during heating.
- After soldering, do not warp the circuit board.

\*\*Please do not open the moisture barrier bag (MBB) more than one week. This may cause the leads of LED discoloration. We recommend storing ProLight's LEDs in a dry box after opening the MBB. The recommended storage conditions are temperature 5 to 30°C and humidity less than 40% RH.

# Precaution for Use

Storage

Please do not open the moisture barrier bag (MBB) more than one week. This may cause the leads of LED discoloration. We recommend storing ProLight's LEDs in a dry box after opening the MBB. The recommended storage conditions are temperature 5 to 30°C and humidity less than 40% RH. It is also recommended to return the LEDs to the MBB and to reseal the MBB.

- The slug is is not electrically neutral. Therefore, we recommend to isolate the heat sink.
- Any mechanical force or any excess vibration shall not be accepted to apply during cooling process to normal temperature after soldering.
- Please avoid rapid cooling after soldering.
- Components should not be mounted on warped direction of PCB.
- Repairing should not be done after the LEDs have been soldered. When repairing is unavoidable, a heat plate should be used. It should be confirmed beforehand whether the characteristics of the LEDs will or will not be damaged by repairing.
- This device should not be used in any type of fluid such as water, oil, organic solvent and etc. When cleaning is required, isopropyl alcohol should be used.
- When the LEDs are illuminating, operating current should be decide after considering the package maximum temperature.
- The appearance, specifications and flux bin of the product may be modified for improvement without notice. Please refer to the below website for the latest datasheets. <u>http://www.prolightopto.com/</u>
