

# Wi-Fi 2x Relay Controller

## Description

Wi-Fi 2x Relay Controller is an intelligent double switch, allowing to control two separate devices. You can control them using [WiseWave](#) app as well as via inputs marked **I1** i **I2**, which control **O1** i **O2** outputs, respectively.

## Schematics

# Technical Specification

| Description                    | Value  |
|--------------------------------|--|
| Input voltage                  | 110 - 230 VAC                                  |
| Power consumption              | <1W  |
| Number of outputs              | 2  |
| Type of outputs                | Relay  |
| Max. output current per output | 5 A  |
| Total max. output current      | 10 A   |
| Output voltage                 | Same as input voltage (110 - 230 VAC)          |
| Number of inputs               | 2  |
| Type of inputs                 | Bistable (ON/OFF) / Monostable (like doorbell) |
| Control signal                 | L or N   |
| Wi-Fi                          | 802.11 b/g/n (2.4 GHz)                         |
| Installation method            | flush-mounted box                              |
| Length                         | 41.8 mm  |
| Width                          | 41.8 mm  |
| Height                         | 25.5 mm  |
